

AMENDMENTS TO THE CLAIMS:

Please cancel Claims 1-30 in the original application and replace with new claims 31-60. This listing of new claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

31. A flexible sleeve adapted for holding a plurality of electronic discs on a first side and an accompanying graphics page on an opposing side, comprising:

a front sheet having a top edge, a bottom edge and two lateral edges, said front sheet further comprising a first opening to form a first pocket for a first electronic video disc, and
5 a second opening to form a second pocket for a second electronic disc;

a middle sheet having a top edge, a bottom edge and two lateral edges;

a back sheet having a top edge, a bottom edge and two lateral edges, said front sheet, said middle sheet and said back sheet interconnected along at least said bottom edges and said lateral edges to form a graphics pocket between said middle sheet and said back sheet
10 which is adapted to hold the accompanying graphics page;

a disc stopping seal formed by interconnecting said first sheet and said middle sheet at a predetermined location above said first opening to hold the second electronic disc at a selected elevated position above the first electronic disc, wherein at least a portion of the first electronic disc is positioned on top of a portion of said second electronic disc.

32. The flexible sleeve of Claim 31, further comprising a binding strip having a plurality of apertures positioned adjacent to one of said lateral edges which are adapted for securing the flexible sleeve in a binding device.

33. The flexible sleeve of Claim 31, wherein said middle sheet is comprised of a non-woven material.

34. The flexible sleeve of Claim 31, wherein said back sheet is comprised of a transparent material to permit viewing of the accompanying graphics page.

35. The flexible sleeve of Claim 34, wherein said transparent back sheet is comprised of polypropylene.

36. The flexible sleeve of Claim 31, wherein at least a portion of the second opening in said front sheet is positioned proximate to said top edge of said front sheet.

37. The flexible sleeve of Claim 36, wherein said second opening has an arcuate shape to form a flap which impedes said second digital video disc from inadvertently becoming disengaged from the flexible sleeve.

38. The flexible sleeve of Claim 31, further comprising a title strip positioned above said upper edge, said title strip comprised of a write-on material capable of recording information which is related to the electronic disc.

39. The flexible sleeve of Claim 31, wherein said first pocket has a lowermost portion positioned proximate to said bottom edge of said flexible front sheet, and said second pocket has an uppermost portion positioned proximate to said top edge of said front sheet.

40. The flexible sleeve of Claim 31, wherein at least said front sheet and said middle sheets are interconnected along said upper edges.

41. The sleeve of Claim 31, wherein said disc stopping seal has a geometric shape comprising at least one of a circle, a straight line, a triangle, a square, a rectangle and an oval.

42. A sleeve adapted for holding a plurality of electronic discs on a first side, and at least one graphics page on a second side, comprising:

a flexible first sheet having a top edge, a bottom edge and two lateral edges with a first length;

5 a flexible second sheet positioned below said first sheet and having a top edge, a bottom edge and two lateral edges with a second length greater than said first length of the first sheet, wherein a first opening is defined between said flexible first sheet and said flexible second sheet, said flexible second sheet further comprising a second opening for receiving a second electronic disc;

10 a flexible third sheet having a top edge, a bottom edge and two lateral edges having a length proximate to said second length of said second sheet, and positioned below said flexible second sheet;

a flexible back sheet having a top edge, a bottom edge and two lateral edges having a length proximate to said second length of said second sheet, said flexible first sheet, said
15 flexible second sheet, said flexible third sheet and said flexible back sheet interconnected proximate to said bottom edges and said lateral edges to form a plurality of pockets adapted for holding a first electronic disc and a second electronic disc on a first side, and at least one pocket on said second side which is adapted for holding said graphics page; and

20 at least one disc stop seal interconnecting said flexible second sheet and said flexible third sheet at one or more predetermined locations between said top edge and said bottom edge to elevate the second electronic disc in a position above said first digital electronic disc, wherein said first electronic disc and said second electronic disc are at least partially stacked to create enhanced storage capacity.

43. The sleeve of Claim 42, wherein said back sheet is comprised of a transparent material.

44. The sleeve of Claim 42, wherein said back sheet comprises at least one thumb cut positioned proximate to said upper edge to facilitate removal of at least one of said plurality of graphics.

45. The sleeve of Claim 42, wherein said flexible second sheet further comprises a flap positioned proximate to a second opening which at least partially covers the second electronic disc.

46. The sleeve of Claim 42, wherein an upper edge of the second electronic disc is positioned proximate to said upper edge of said flexible second sheet.

47. The sleeve of Claim 42, further comprising a plurality of apertures positioned within a binding strip which is interconnected to one of said lateral edges, said plurality of apertures adapted for interconnection to a binding device.

48. The sleeve of Claim 42, wherein said flexible third sheet is comprised of a non-woven material.

49. The sleeve of Claim 42, wherein said flexible back sheet is comprised of polypropylene.

50. The sleeve of Claim 42, wherein said flexible first sheet further comprises a thumb cut positioned along said upper edge to facilitate removal of the first electronics disc.

51. A sleeve adapted for holding a plurality of electronic discs on a front side and at least one graphics page on a back side, comprising:

a flexible front sheet having a top edge, a bottom edge, and lateral edges extending therebetween;

5 a plurality of openings in said front sheet which are operably sized to receive the electronic discs, said plurality of opening including a second opening positioned above a first opening, a third opening positioned substantially adjacent to said first opening and a fourth opening positioned above said third opening and adjacent to said second opening;

10 a flexible back sheet having a top edge, a bottom edge, and lateral edges positioned therebetween;

a flexible middle sheet positioned between said flexible front sheet and said flexible back sheet, said flexible front sheet, said flexible back sheet and said flexible middle sheet interconnected along at least said bottom edge and said lateral edges to form a plurality of pockets positioned proximate to each of said first opening, second opening, third opening and fourth opening for holding the electronic discs, and a fifth and sixth pocket formed between said middle sheet and said flexible back sheet for holding a plurality of graphics; and

15

a DVD stop seal interconnecting said front sheet to said middle sheets between said first opening and said second opening wherein the electronic discs in said second pocket and said fourth pocket are elevated about the electronic discs positioned in said first pocket and said third pocket of said sleeve.

20

52. The sleeve of Claim 51, wherein said flexible front sheet and said flexible back sheet are comprised of a non-woven material.

53. The sleeve of Claim 51, wherein said flexible middle sheet is comprised of non-woven material.

Application No.: 10/765,446

54 The sleeve of Claim 51, wherein said disc stopping seal has a geometric shape comprised of at least one of a circle, a square, an oval, a triangle, a straight line, and a rectangle.

55. The sleeve of Claim 51, further comprising a binding strip interconnected to said bottom edge of said sleeve, said binding strip having a plurality of apertures adapted for interconnection to a binding device.

56. A flexible sleeve adapted to hold a plurality of electronic discs on a first side and a graphics page on a second side, comprising:

a first flexible sheet having a first length;

a second flexible sheet positioned below said first flexible sheet, wherein a first pocket for holding a first electronic disc is created therebetween;

a third flexible sheet positioned below said second flexible sheet, wherein a second pocket for holding a second electronic disc is created therebetween;

a transparent fourth flexible sheet positioned below said third flexible sheet, wherein a third pocket for holding a graphics page is created therebetween, and wherein said first flexible sheet, said second flexible sheet, said third flexible sheet and said transparent fourth sheet are operably interconnected, and wherein said first pocket and said second pocket at least partially overlap.

57. The flexible sleeve of Claim 56, wherein said second pocket is positioned above said first pocket.

58. The flexible sleeve of Claim 56, wherein a lower most portion of said second pocket is positioned between an uppermost portion and a lowermost portion of said flexible sleeve.

59. The flexible sleeve of Claim 56, wherein said second pocket further comprises a flap extending over an opening of said second pocket.

60. The flexible sleeve of Claim 56, wherein said first pocket has a lowermost portion positioned proximate to a lower edge of said flexible sleeve.
